Transportation Tracking System

Web app UI & UX & brand design

The client requested branding design, UI & UX design for the application and creating the templates for its implementation.

I was part of the the development of the application from zero, designing and planning the flow in order to make it simple and clear. The final solution is a full responsive layout, with a elegant look and feel and easy to use

Also I worked in several design resources such as business card and brochure and other social media for advertising purposes.
